Features

- Indicated for use with up to 1600 mL fresh frozen plasma.

- Residual leucocytes consistently averaging less than $4 \times 10^4$ per transfusion (see performance summary).

- High efficient methylene blue removal with a reduction efficiency averaging 93% when filtering one unit of plasma, treated with methylene blue at a final concentration of 1 μmol/L.*

- No saline prime or flush required.

- Low hold-up volume, 33 mL.

- Easy to use.
