RN High Efficiency Leucocyte Removal Filter

For Red Cells – Neonatal

- Clinically proven media technology
- Easy prime technology
- Enhanced ease of use
- Unique needleless access port
- High efficiency leucocyte removal
- High red cell recovery
- Minimal filter hold-up volume

Features and Benefits

- Clinically proven media technology significantly reduces the risk of leucocyte associated transfusion complications such as microaggregates, alloimmunisation, febrile reactions, refractoriness to platelets, Cytomegalovirus and immunosuppression.*

- Easy to use technology provides priming by gravity or rapid priming by squeezing the blood bag.

- Proven to consistently and efficiently deliver low leucocyte residuals, affording the maximum patient protection against leucocyte related transfusion complications (consistently averaging less than 2 x 10⁹ for aliquots of approximately 60 mL and/or less than 5 x 10⁹ for aliquots from approximately 60 – 150 mL).

- High technology filtration media and minimal filter hold-up volume (12 mL) provides minimal loss of red cells without the need for saline flushing.

- Primes directly with red cells quickly and conveniently without the need for priming with saline.

- Provided with a needleless adaptor to reduce the risk of needle stick injury.
