Breathing System Filter for Anaesthesia

Features
- Pleated hydrophobic membrane
- Validated for removal of Hepatitis C virus, HIV, Influenza A virus, *Mycobacterium tuberculosis*, *Staphylococcus aureus* and abnormal prion proteins
- 100% retentive for liquid-borne contaminants
- Retains natural rubber latex allergens in solutions and in airborne particles
- Individually integrity and efficiency tested
- Small volume

Benefits
- High efficiency patient protection against cross-contamination with human pathogens
- Extended circuit life
- Cost reduction
- Faster turn-around times
- Less medical waste
- Proven protection against latex contamination
- Range of applications
**Product Features**

- **Effective microbial barrier:** The pleated hydrophobic membrane provides effective protection against airborne and liquid-borne microorganisms. This assures protection against cross-contamination between patients in anaesthesia.\(^1,2,3\) The filter has been validated to retain *Mycobacterium tuberculosis*, *Staphylococcus aureus*, Hepatitis C virus, HIV, infectious PrP\(^\text{Sc}\) protein, *Candida albicans*, and Influenza A virus.\(^4,5,6,8\)

- **Route of use:** The Ultipor 25 will protect the interior of the breathing system from patient derived contamination, allowing extended use of the breathing system in conjunction with a hospital protocol that ensures hygienic and mechanical integrity of the system. Please refer to your breathing system manufacturer for information on whether the system being used has been validated for extended use.

- **Additional humidification:** Patient water loss is minimised to a physiological level under conditions of semi-closed circle anaesthesia.\(^8\) In semi-open paediatric anaesthesia ventilation the Ultipor 25 increases instantly the humidity in the dry ventilation gases to a physiological level.\(^11\)

- **Hydrophobicity and retention of contaminated secretions\(^2,3,5,12\):** All Pall Breathing System Filters contain the proprietary Pall fine hydrophobic filter media. The Pall Ultipor 25 has been shown to withstand a water intrusion pressure (hydrophobicity) in excess of 70 cm of water column.\(^13\)

- **Latex retention:** The Ultipor 25 is free of natural rubber latex. It retains natural rubber latex allergens in liquids and contained in airborne particles.\(^4,15\)

- **Low resistance:** Unique pleated hydrophobic membrane assures low air flow resistance throughout clinical use when used according to the instructions for use.

- **Small volume:** Due to its small dead space, the Ultipor 25 can be used for adult and paediatric patients in anaesthesia. Filter volume is 35 mL.\(^11,16\)

**Pall Total Quality and Performance Guarantee**

Each Pall Ultipor 25 Breathing System Filter is individually tested during manufacture for:

- **Filter Integrity** - assuring housing and seal quality.
- **Filtration Efficiency** - using a non-destructive test, assuring membrane quality.

A Product Validation Certificate that is batch and customer specific can be provided that details testing and validation. This is the customer’s guarantee of 100% reliability, performance in use and assurance of protection of breathing systems and equipment, patients and staff.

All Pall BB25 filters are equipped with a gas monitoring port.

More catheter mounts and connectors are available, please consult your Pall representative for details.

* To order sterile variants, add S to the reorder code.
